COMP 110/L Lecture 2

Maryam Jalali

Slides adapted from Dr. Kyle Dewey

Programming Languages as Natural Languages

Programming languages are a lot like human languages in that they have syntax rules.

Defines what valid sentences are

Defines what valid sentences are

Defines what valid sentences are

Defines what valid sentences are

Megan goes to the store.

The goes store to Megan.

Defines what valid sentences are

Megan goes to the store.

The goes store to Megan.

Example

- In many programming languages, commands or statements are terminated by semicolons
- Just as most sentences are ended with a period.
- In English paragraphs are separated by lines.
- In programming languages blocks of code are separated by curly brackets.

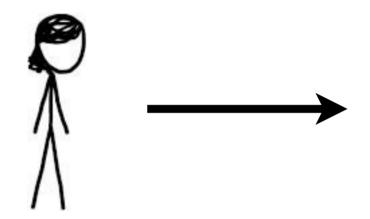

Defines what valid sentences mean

Defines what valid sentences mean

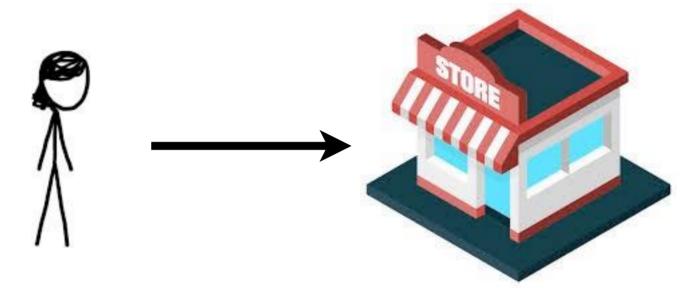

Defines what valid sentences mean

Defines what valid sentences mean

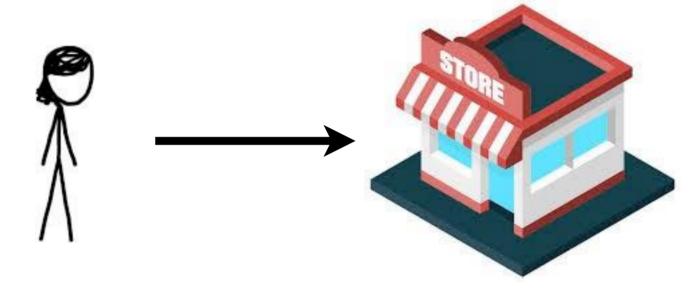

Defines what valid sentences mean

Megan goes to the store.

Colorless green ideas sleep furiously.

Defines what valid sentences mean

Megan goes to the store.

Colorless green ideas sleep furiously.

Programming Language Semantics

- Some languages have the same problem!
- All syntactically valid sentences in Java have prescribed meaning
 - ...this meaning might not be useful...
 - ...and it definitely could be unintended...

Have to start somewhere

Have to start somewhere

Have to start somewhere

Megan goes to the store.

Need nouns (that which can act or can be acted on)

Have to start somewhere

Megan goes to the store.

Need nouns (that which can act or can be acted on)

Need verbs (the actions)

Have to start somewhere

Megan goes to the store.

Need nouns (that which can act or can be acted on)

Need verbs (the actions)

Need connections between the two

The Point

- To make complete sentences, we need a lot of stuff
- Java requires a lot for a complete sentence

The Point

- To make complete sentences, we need a lot of stuff
- Java requires a lot for a complete sentence

```
public class MyClass {
   public static void
   main(String[] args) {
        ...
   }
}
```

The Point

- To make complete sentences, we need a lot of stuff
- Java requires a lot for a complete sentence

```
public class MyClass {
    public static void
    main(String[] args) {
        magical
        incantation
    }
}
```

Let's see some code! (in jGrasp)

Example:

HelloWorld.java

Java Coding Process

Text Editor

emacs, vi, pico, nano...

emacs, vi, pico, nano...

MicrosoftWord, Google Docs

emacs, vi, pico, nano...

Wanted: plain text without formatting

Also nice: syntax highlighting
